

SapthaEvent Mobile Release & SEO Report

Generated from repository state and deployment readiness checks.

Release Status

Android App Bundle	Generated	android/app/build/outputs/bundle/release/app-release.aab
Signing Config	Configured	android/gradle.properties + android/app/build.gradle
App Build	Complete	Release AAB ready
SEO Indexing	Ready	/robots.txt and /sitemap.xml implemented

Completion Progress

Deployment Summary

The Android app wrapper is fully prepared for Google Play publication. A signed Android App Bundle has been generated and verified, and SEO support is enabled for the web backend using standard crawler endpoints. This report helps stakeholders understand the current release state and next steps for launch.

Key Action Items & Next Steps:

- 1. Upload the bundle to Google Play Console via Production or Internal Testing.
- 2. Provide store listing assets: app icon, screenshots, description, and privacy policy.
- 3. Verify the app loads the live HTTPS backend and that critical flows work on device.

4. Submit the app for review and monitor install/test feedback before full rollout.

Key Findings

- The app bundle exists at android/app/build/outputs/bundle/release/app-release.aab.
- App signing values are already configured in android/gradle.properties and android/app/build.gradle.
- The Flask backend exposes /robots.txt and /sitemap.xml for search engines.
- Public pages are enabled for indexing while private routes are blocked.
