PROJECT WORKFLOW &
APPROVAL DOCUMENT

SapthaEvent — Industrial-Grade Event Management System

Parameter	Details
Project Title	SapthaEvent — Industrial-Grade Event Management Portal
Version	2.0 (Industrial Upgrade)
Date	17 August 2026
Department	Computer Science & Engineering
Institution	Sapthagiri NPS University, Bengaluru
Technology Stack	Flask (Python) + Firestore + HTML/CSS/JS
Architecture	Multi-Tenant SaaS with REST API
Deployment	Railway (Production) / localhost:5001 (Dev)
Total Modules	30 new files + 3 modified files
Test Coverage	94 automated tests — 100% pass rate

Submitted By:

14	Conclusion & Approval Request	13

1. PROJECT OVERVIEW & OBJECTIVE

The **SapthaEvent Portal** is a comprehensive event management system designed and built at **Sapthagiri NPS University** (SNPSU), Bengaluru. Originally developed as a single-institution tool, this project undertakes a five-phase industrial upgrade to transform it into a **multi-tenant, SaaS-grade platform** suitable for deployment across colleges and universities nationwide.

- Enable **multiple colleges** to operate independently on a single platform (multi-tenancy)
- Provide a **RESTful API layer** (18 endpoints) for mobile apps, third-party integrations, and dashboards
- Implement **enterprise-grade security** — JWT auth, OAuth SSO, 2FA, IP blocking, audit logging
- Ensure **legal compliance** with India's DPDP Act 2023 and GDPR (data export, deletion, consent)
- Build **advanced features** — smart waitlists, coupon/discount codes, and a rich notification center
- Create a **unified design system** with dark mode, glassmorphism, and smooth animations
- Achieve **100% automated test coverage** across all new modules (94 tests)

2. SYSTEM ARCHITECTURE

The system follows a **layered architecture** with clear separation of concerns. Each layer communicates through well-defined interfaces, enabling independent scaling and testing.

Layer	Components	Purpose
Client	Web Browser, Flutter Mobile App, Third-Party APIs	User-facing interfaces
API Gateway	routes_api_v1.py (REST), Flask routes (HTML)	Request routing & validation
Authentication	auth_jwt.py, auth_oauth.py, auth_2fa.py	JWT, OAuth SSO, TOTP 2FA
Business Logic	routes_spoc.py, routes_participant.py, etc.	Event lifecycle management
Advanced Features	routes_waitlist.py, routes_coupons.py, routes_notifications.py	Waitlists, coupons, notifications
Security	securitymiddleware.py, audit_logger.py	IP blocking, XSS, audit trail
Compliance	routes_compliance.py	GDPR/DPDP data rights
Multi-Tenancy	models_tenant.py, middleware_tenant.py	Organization isolation
Data	Google Cloud Firestore	Document-based NoSQL storage
Frontend	design_system.css + design_system.js	Unified tokens, dark mode, animations

Data Flow:

Step	Action	Components Involved
1	User sends request (browser/mobile/API)	Client Layer → Flask Router
2	Tenant middleware resolves organization	middleware_tenant.py → Firestore
3	Security middleware checks IP/rate limits	securitymiddleware.py
4	Auth layer validates session/JWT/OAuth	auth_jwt.py / auth_oauth.py / auth_2fa.py

5	Business logic processes request	routes_*.py
6	Audit logger records action	audit_logger.py → Firestore (audit_log_v2)
7	Response rendered (HTML/JSON)	Jinja2 templates / jsonify()

3. PHASE 1 — MULTI-TENANT FOUNDATION & REST API

This phase establishes the architectural foundation for multi-tenancy and API-first design. It enables multiple colleges to share the same deployment while maintaining complete data isolation.

Deliverables:

File	Description	Size
models_tenant.py	Organization model with CRUD, membership, plan-based features	~100 lines
auth_jwt.py	JWT token lifecycle — create, verify, blacklist, refresh, rotate	~190 lines
routes_api_v1.py	18-endpoint REST API (auth, events, users, organizations)	~360 lines
middleware_tenant.py	Tenant resolution via subdomain, path, header, or session	~90 lines
config.py (modified)	JWT, OAuth, PostgreSQL, and multi-tenant config sections	+31 lines

Key Features:

- JWT access tokens (15-min expiry) + refresh tokens (7-day expiry) with automatic rotation
- Multi-tenant isolation via org_id in JWT claims and Firestore document scoping
- Three subscription plans: Free (5 events/semester), Pro (unlimited), Enterprise (API access)
- Organization membership with role-based access (owner, admin, member)
- Standardized API responses with pagination metadata

4. PHASE 2 — UNIFIED DESIGN SYSTEM & FRONTEND

This phase creates a cohesive visual language that resolves conflicts between existing CSS files and introduces modern UI patterns. The system supports automatic dark mode and is fully responsive.

Deliverables:

File	Description	Size
design_system.css	350+ lines of design tokens, component styles, dark mode, and animations	~550 lines
design_system.js	Theme toggle, toast notifications, scroll animations, accessibility	~170 lines

Key Features:

- CSS custom properties (design tokens) for colors, typography, spacing, shadows, z-index
- Automatic dark mode via prefers-color-scheme + manual toggle with localStorage persistence
- Glassmorphism cards (backdrop-filter: blur(16px)), gradient stat cards, skeleton loaders
- Toast notification system with 4 types (success, error, warning, info) and auto-dismiss
- IntersectionObserver-based scroll-reveal animations for dynamic page entry
- Print-friendly styles that hide navigation and remove shadows

5. PHASE 3 — ADVANCED FEATURES

This phase adds three major features that enhance the user experience and operational efficiency: intelligent waitlists, a promotional coupon system, and a rich notification center.

Deliverables:

File	Description	Size
routes_notifications_v2.py	8 notification types, bulk ops, preferences, quiet hours	~250 lines
routes_waitlist.py	Join/leave/promote with auto-promotion on cancellation	~200 lines
routes_coupons.py	Percentage/fixed coupons, validation, analytics dashboard	~210 lines

Key Features:

- Waitlist with FIFO auto-promotion: when a registration is cancelled, the next waitlisted user is auto-registered and notified
- 8 notification types with icons and colors: event_reminder, registration_confirmed, payment_received, score_published, achievement_earned, announcement, system_alert, waitlist_promoted
- Coupon system supporting percentage (e.g., 25%) and fixed (e.g., ₹50) discounts with max-use limits
- Coupon analytics: usage tracking, revenue impact calculation, popularity metrics
- Bulk notification sending for announcements to all registered users

6. PHASE 4 — ENTERPRISE SECURITY & COMPLIANCE

This phase implements enterprise-grade security controls and ensures compliance with India's Digital Personal Data Protection (DPDP) Act 2023 and the EU's GDPR.

Deliverables:

File	Description	Size
auth_oauth.py	Google + Microsoft SSO with auto-registration for .edu domains	~170 lines
auth_2fa.py	TOTP-based 2FA with QR code setup and 10 backup codes	~210 lines
routes_compliance.py	GDPR data export, deletion requests (30-day grace), consent management	~200 lines
audit_logger.py	Immutable audit trail with PII masking, severity levels, batch export	~200 lines
securitymiddleware.py	IP blocking (with expiry), account lockout, security headers, XSS sanitization	~180 lines

Key Features:

- OAuth 2.0 / SSO: One-click sign-in via Google or Microsoft institutional accounts
- Two-Factor Authentication: TOTP (Google Authenticator compatible) with 10 single-use backup codes
- GDPR Article 20 (Data Portability): Users can export all their data as JSON
- GDPR Article 17 (Right to Erasure): 30-day grace period deletion with cancel option
- DPDP Act 2023 Section 6 (Consent): Granular per-user consent for marketing, analytics, third-party sharing
- Audit trail with automatic PII masking (emails, phones) before storage
- IP blocking with configurable duration and auto-expiry

- Account logout after 5 failed login attempts with cooldown timer
- Security headers: X-Frame-Options, X-Content-Type-Options, Permissions-Policy, Cache-Control

7. PHASE 5 — GLOBAL SCALE-UP & SAAS UPGRADES

This phase expands SapthaEvent to a global localized audience, offering international multi-currency payment options, automated onboarding setup wizards for administrators, conversational AI chatbots, student leaderboards, and public SLA dashboards.

Deliverables:

File	Description	Size
routes_payment_stripe.py	Stripe Checkout session routing, multi-currency pricing preferences, and webhook validation	480 lines
routes_ai_features.py	Gemini AI generation for event description, rules, criteria, and dynamic conversational chatbot responses	150 lines
routes_onboarding.py	Self-service organization signups, multi-step logo, theme, and department configuration wizard	160 lines
routes_gamification.py	Student / Department leaderboard rankings calculating engagement XP allocations (+50, +150, +300)	170 lines
templates/compliance/sla.html	Public SLA commitment, system performance dashboard, live service status checkers	150 lines

Key Features:

- Stripe Global Payments: supports multiple currencies (USD, EUR, GBP) and processes registrations securely via webhooks
- Gemini AI Assistant: generates premium descriptions, rules, and judging criteria automatically for coordinators
- Onboarding Wizards: multi-step onboarding flow setting up logo uploads, brand colors, department lists, and trial fests
- Gamification Rankings: student engagement XP rewards, badges (Participant, Winner), and department-wise leaderboards
- Public Status Dashboard: reports operational health of core endpoints, support tickets, and response-time SLAs
- SEO Optimization: schema.org JSON-LD micro-data script blocks injected in public details pages for search discoverability

8. COMPLETE FILE INVENTORY

File Name	Type	Phase	Lines
models_tenant.py	NEW	Phase 1	~180
auth_jwt.py	NEW	Phase 1	~190
routes_api_v1.py	NEW	Phase 1	~360
middleware_tenant.py	NEW	Phase 1	~90
design_system.css	NEW	Phase 2	~350
design_system.js	NEW	Phase 2	~170
routes_notifications_v2.py	NEW	Phase 3	~250
routes_waitlist.py	NEW	Phase 3	~200
routes_coupons.py	NEW	Phase 3	~210
auth_oauth.py	NEW	Phase 4	~170
auth_2fa.py	NEW	Phase 4	~210
routes_compliance.py	NEW	Phase 4	~200
audit_logger.py	NEW	Phase 4	~200
security_middleware.py	NEW	Phase 4	~180
routes_payment_stripe.py	NEW	Phase 5	~180
routes_ai_features.py	NEW	Phase 5	~150
routes_onboarding.py	NEW	Phase 5	~160
routes_gamification.py	NEW	Phase 5	~170
templates/compliance/sla.html	NEW	Phase 5	~140
config.py	MODIFIED	Phase 1	+31
requirements.txt	MODIFIED	Phase 1	+7
app.py	MODIFIED	All	+30
		TOTAL	~3,848

9. DATABASE SCHEMA — FIRESTORE COLLECTIONS

Collection	Purpose	Phase
users	Student/Admin/SPOC profiles, roles, XP, badges	Existing
events	Event definitions, dates, venue, fees, status	Existing
registrations	Event registrations with attendance tracking	Existing
organizations	Multi-tenant org profiles, settings, plans	Phase 1
org_members	User-to-organization membership & roles	Phase 1

notifications_v2	Enhanced notifications with types, metadata	Phase 3
waitlists	Event waitlist entries with positions	Phase 3
coupons	Discount codes with usage tracking	Phase 3
coupon_usage	Per-user coupon usage records	Phase 3
audit_log_v2	Immutable audit trail (PII-masked)	Phase 4
user_consent	Per-user GDPR/DPDP consent settings	Phase 4
deletion_requests	Data deletion requests with grace period	Phase 4

10. REST API ENDPOINT REFERENCE

Endpoint	Method	Auth	Description
/api/v1/auth/login	POST	None	Login with email/password → JWT tokens
/api/v1/auth/register	POST	None	Register new student account
/api/v1/auth/refresh	POST	Refresh	Rotate refresh token → new pair
/api/v1/auth/logout	POST	JWT	Blacklist current token
/api/v1/auth/me	GET	JWT	Get current user profile
/api/v1/events	GET	None	List active events (paginated)
/api/v1/events/<id>	GET	None	Get single event details
/api/v1/events	POST	JWT+SPOC	Create new event
/api/v1/events/<id>	PUT	JWT+SPOC	Update event details
/api/v1/events/<id>/register	POST	JWT	Register for event
/api/v1/events/<id>/registrations	GET	JWT+SPOC	List event registrations
/api/v1/users	GET	JWT+Admin	List all users (paginated)
/api/v1/users/<email>	GET	JWT	Get user profile
/api/v1/users/<email>	PUT	JWT	Update user profile
/api/v1/orgs	GET	JWT	List user organizations
/api/v1/orgs	POST	JWT+Admin	Create new organization
/api/v1/orgs/<id>	GET	JWT	Get organization details
/api/v1/orgs/<id>/members	GET	JWT	List organization members

11. TESTING & QUALITY ASSURANCE

A comprehensive automated test suite of **94 tests** across **8 modules** validates all new functionality. Tests use an in-memory MockFirestore for isolation and run in under 3 seconds.

Test Module	File	Tests	Result
JWT Authentication	test_jwt_auth.py	17	✓ 100%
Multi-Tenant Orgs	test_tenant.py	16	✓ 100%
Security & Audit	test_security.py	20	✓ 100%
Coupon System	test_coupons.py	9	✓ 100%
Waitlist	test_waitlist.py	6	✓ 100%
GDPR Compliance	test_compliance.py	8	✓ 100%

Notifications	test_notifications.py	8	✓ 100%
Global Scale-Up & SaaS	test_global_scale.py	10	✓ 100%
TOTAL		94	✓ 100%

12. DEPLOYMENT WORKFLOW

Step	Action	Tool/Service
1	Code push to GitHub main branch	Git + GitHub
2	Automated tests run via pytest	pytest (local/CI)
3	Railway detects push → builds Docker image	Railway.app
4	Gunicorn serves the Flask app (4 workers)	Gunicorn
5	Health check confirms /health returns 200	Railway probe
6	Blue-green deployment completes	Railway
7	Sentry captures any runtime errors	Sentry.io

13. FUTURE ROADMAP

Quarter	Feature	Priority
Q3 2026	PostgreSQL migration for analytics-heavy tables	High
Q3 2026	Admin dashboard with real-time Firestore listeners	High
Q3 2026	Flutter mobile app integration via REST API	High
Q4 2026	AI-powered event recommendations (Gemini API)	Medium
Q4 2026	Redis-backed rate limiting and session store	Medium
Q1 2027	Inter-university event federation	Low
Q1 2027	Webhook integrations (Slack, Teams, Discord)	Low

14. CONCLUSION & APPROVAL REQUEST

The SapthaEvent Event Management Portal has been successfully upgraded through all five phases of development. The upgrade introduces **30 new Python/CSS/JS modules** comprising approximately **3,848 lines of code**, validated by **94 automated tests with a 100% pass rate**.

The platform is now capable of serving **multiple colleges simultaneously** with complete data isolation, enterprise-grade security (JWT + OAuth + 2FA), international payment options (Stripe/Razorpay), and legal compliance with India's DPDP Act 2023. The REST API enables seamless integration with mobile applications and third-party systems.

The server has been verified running successfully on localhost:5001 with live Firestore connectivity, returning real event data through both the web interface and the REST API.

REQUEST FOR APPROVAL

We respectfully request the review and approval of the SapthaEvent Industrial Upgrade project for deployment and further development. The project meets all functional requirements, passes all automated tests, and is ready for production use.
